## Event scroll (minor)

Posted by Rick - 2006/10/29 06:49

---

If the event list is scrolled down and an item in it is deleted (left-click: Event List > Delete Event) the list does not fully refresh. The item is removed from it, but the entire list is not redrawn, so it can remain "scrolled down" but without the scroll bar available any more.

This can be manually rectified with left-click: Refresh, but that's a tad annoying.

I thought I fixed that already in one of the beta versions but it seems that there are still bugs in it. I'll check it again.
