## Installing in Original Folder

Posted by Tursiops47 - 2006/11/03 10:45

---

When I upgraded Rainlendar to version 2, I wanted to install it in the same folder C:/Program Files/Rainlendar as the original. I mistakenly figured it would overwrite and update. I was only half right. The previous data was retained. However, the executable filename is different; hence my Rainlendar folder contained both:

Rainlendar.exe	116k	1/21/2006
Rainlendar2.exe	959k	10/28/2006

Although it booted up and worked fine, on startup I got an error dialog saying "Rainlendar.exe has a problem and must shut down. Do you want to tell Microsoft?" ;)

Well, Rainlendar (2) doesn't shut down. It was just trying to load BOTH executables. I deleted the older (116 K) file, rebooted, and everything appears to be fine. Now the only file left over from 1/21/2006 is a .dll and I think I'll leave that alone!

Rainlendar2 is completely different application so it shouldn't be installed into the same folder as the old Rainlendar.
