
How to have multiple months visible Horizontally

Posted by mrtom - 2006/11/03 16:38

Am using the latest Rainlendar2 release and Shadow4 skin. Have looked at all the options and cannot determine how to have multiple months visible at the same time in a horizontal format. Am using the "long calendar" option. The days of the various months are stacked continuous and vertically and no header for each month is presented. (ie NOVEMBER 1..2..>>28..29..30..1..2..)

Any Suggestions?

Thanks, Tom

You can add as many calendar windows as you want. Just click the calendar on the left and click --> the number of calendars you want. You can then move them into what ever place you want.
