
Outlook Alarm Problem

Posted by courtpl - 2006/11/03 17:50

Hello All ...

I have a little problem, i have set on the outlook properties the option "Import Alarms" to true.
But when an alarm appear on my desktop and i click on the dimiss button, the application freeze and use 50% of the processor.

The button snooze work fine ...

Have-you an idee for correct this ???

I tried this but I wasn't able to reproduce the problem. Is there anything in the log file? Does the same happen with all Outlook events?
