
Vertical Shadow4 Calendars

Posted by Eli - 2006/11/04 07:19

Hi,

I couldn't find it anywhere so I decided to start a new topic.

I've edited Rainy's Shadow4 skin and added vertical calendars with 2 and 3 month display. If anyone's interested in such functionality just give me e-mail address to send it to. My e-mail: telimergmail.com

Also, if there's any interest, it could be added to the skins downloads or included in the next release (just my small contribution).

If there's no interest then just delete this post :pinch:

Here you go!

<http://img467.imageshack.us/img467/5360/shadow4vertla9.th.jpg>

This is Shadow4 normal calendar nad my Dual Vert and Triple Vert calendars.

The good side is it is a single window not separate calendars.

Buttons, showing adjacent days or week numbers can be switched. It can also be changed to start with previous month or any month you wish just like in original Shadow4.

I use Rainlendar normally in a 2 wide by 3 high display (6 months). On occasion, I display the whole year (when making plans) as 3 wide by 4 high. The V2.0 didn't provide this. I am very interested in being able to do this with the new version. Can you post the updated file somewhere? I will email the thread originator for it also. Thanks in advance!

Dave
