## Rainlendar 2.1 build 41

Posted by Rainy - 2007/06/10 14:15

---

Build 41 can be downloaded from here:

Windows: Rainlendar-2.1.b41.zip

Linux: Rainlendar-2.1.b41.tar.bz2

This is beta version! It has not been tested.

- 10 Jun 2007

- o Moved proxy settings to Options->Advanced.
  - o Added proxy support to GooglePlugin.
  - o Outlook Task priority didn't work. Fixed.
  - o Added possibility to choose the shown message folders in Outlook plugin.
  - o Changed the way Google events are created to reduce the possibility of duplicates.
  - o Snooze times are customizable from the advanced options
  - o The todo dialog shows only calendars which are capable of storing todo items.
  - o Task without start and due date was shown on all days in the calendar. Fixed.
  - o It's now possible to translate the year postfix for birthdays and anniversaries.
  - o Changed the translation of the event list headers.
  - o Limited network access in Google plugin to one thread at a time.

---

Applying this version lost the ability to sort the todo list and did something to break the .ini file.

Reinstalling the current release required me to have to restore an backup copy of the .ini or it wouldn't load the program.

I use in Korean.

"in next week"

"in %s week"

there is No Translation. It just is in English.
