## scripting probs

---

Hey mates!

I've got a small problem!

I'm making my own skin and I took another skin and just modified it's .ini-file.

the thing is that when I'm adding a new Event it doesn't appear in the event list. it only shows if the event is on the current date.

I don't know if it's supposed to be like that or if it's something i've done wrong in the script. But the whole idea with Events must be that you can your event a long time before they happens?

So please, tell me if I'm the failing link or if I can fix it somehow (;
