# Google calendar plugin

Posted by stovesy - 2007/06/20 06:26

_____

I am getting the following error when trying to access a calendar on Google

10:11:30:  Stovesy on Google: Authenticating...
10:11:31:  Stovesy on Google: Result: (7) 0 Unknown error.

password and email options are correct.

I am using a proxy server on port 3128, and have set the proxy option to linux.charnvel:3128

I have had this working on release b40.
by specifying Proxy option for each calendar.

Any suggestions?
Many thanks.

_____

The error 7 is defined in curl as CURLE_COULDNT_CONNECT which means that Rainlendar cannot connect to the server for some reason.

Has anyone else tried the latest beta with a proxy? Does it work at all?

Hi.

I get the same error/problem with the same setup.
Though it didn't work for me with b40 either.

Greetings,
 Michael

Yeah its not working for me behind a proxy either. The log says:

12:25:07 PM:  Google Calendar: Authenticating...
12:25:08 PM:  Google Calendar: Result: (7) 0 Unknown error.

There is no mention of the proxy.

Ok, i'm now trying to use it on a different network with a direct connection to the internet. Now i'm actually getting a dialogue box (which is good because I can see something's gone wrong without looking in the log). I've attached an image of what it says. I'm pretty sure i've got it set up correctly.
