## moving year to same line as the month

Posted by MrB - 2006/11/04 16:08

---

For Rainlendar Version 2.0

In the shadow4 calendar skin, is there a way to get the have the year displayed up above the days and on the the same line as the month?

We were able to configure the position of the year in earlier versions.

It is possible but you would have to edit the skin. I'll write documentation how to do that as soon as I have time. In the mean time you can always use your old modified Shadow3 skin.

I have created a modified version of Shadow4. It gives more options in the advance part of the skin. You can set the year to be on the same line by setting Year top to 1, and Year lower right to 0. Note that if you set both of them (ie no year) there will also be no month displayed.
