Rainlendar 2.1 build 42

Posted by Rainy - 2007/07/02 05:52

_____

Build 42 can be downloaded from here:
Windows: Rainlendar-2.1.b42.zip
Linux: Rainlendar-2.1.b42.tar.bz2

This is beta version! It has not been tested.

 - 02 Jul 2007
o Added a check to make sure the configuration file is writable.
o Some fixes to the proxy support.
o Windows snap also to the taskbar.
o Added offline calendar support to Google plugin.
o Only 'alert' alarms are read from the Google calendar.
o Fixed DST issue in weekly recurring outlook appointments.
o "Keep on screen" repositioned a window incorrectly if it's dimensions were smaller than the threshold. Fixed.
o ScrollGroup showed tooltips even if they were outside it's area. Fixed.

_____

Let me know if the proxy support is not working in this version either.

_____

Hiya Rainy,

Unfortunately I am having trouble with the Google Calendar in this build.. With a dialog of "Unable to Find the Chosen Calendar" being Displayed. I know the URL is correct (In the debug log it eventually returns a 200 ok)

Please let me know if you want / need anything else to help debugging (I am on a direct Internet connection thus no proxy involved)

20:31:16: Google: Result: (0) 200 OK.
20:31:16: Google: Auth string:
DQAAAGwAAAA0uDi7bAogXvLLGx47hqqHhcoALaNLZPYEFv68GSpPxnwlf5dNFoVn_hcZzhSsL4mB_cIzG5z2Am38b9
_kzB6FuHYY0u1FAlYdRr9JdvuV13br_UQGnu9FueXiu86GPP_SmiYWlm6XJctEK-cctTXM.
20:31:16: Google: Downloading: http://www.google.com/calendar/feeds/ozgreg@gmail.com
20:31:16: Google: Result: (0) 302 Moved temporarily.
20:31:16: Google: Retry with url http://www.google.com/calendar/feeds/ozgreg@gmail.com?gsessionid=eXzmr6R5mrg
20:31:16: Google: Result: (0) 200 OK.

_____

Does the dialog list the available calendars correctly? Are you able to read the first calendar from Google if you clear the "Calendar" field in the Rainlendar's Google Calendar settings?

_____

Yes the Dialog does list the Correct Calendars. I cleared the Calendar Name and removed the space and it loaded up a Second Time.. Nice Spot Mate..

This appears to be running correctly for me. I'm not seeing any other problems yet. I'll keep using it for a couple more days though and if I see anything I'll report back.

_____

I'm still getting the 'Server returned the result: (0) 403 Forbidden. No idea why. I'm on a direct connection.

_____

Tried this build, and the modified snooze field works great. :)

_____

A further (minor) suggestion for this is that amounts divided by 1440 get shown as days (e.g. 10080 = 7 days). Why? Because the alarm setting for each has a selection bar for minutes / hours /days. If someone's going to set an alarm that's days ahead of an event, then it'd be good if the snooze option could match that.

_____

In trying this build I again have lost that ability to do a custom sort of the todo list and the list has reverted to the original non-sorted view.

Copying the current backup copy of the Rainlender.ini file and refreshing nor closing Rainlender2 and restoring the backup of the .ini has any affect.

Thanks...

_____

Hello, this is my first time posting, so I should say great product - I LOVE IT! I've been playing around with this build and I rain into two problems with the Google plugin. I'm a novice so forgive me if this has already been addressed.

1) Can we sync from Rainlendar to Google? My GCal events show up in rainlendar, but when I create an event in Rainlendar, I get an error message (screenshot below). I know that Outlook is one-way sync, but does the same apply to Google? The main reason I switched to this build was to sync both ways because I don't want to have to rely on creating events in Google exclusively.

2) My synced events say "" between the time and information. How can I resolve this issue? (screenshot below)

hmm, what do you think this means? just here to the right you see that there is a lite and a pro version. click on more info to see the difference.
Maybe problem 1.) is also bbased on this, maybe you need a pro version to synch back.

_____

To be able to use the two way sync with the Google calendar you need to choose the "Google Calendar" from the drop down list instead of "Network Shared Calendar" when you create a new calendar in Rainlendar's options.

_____

I have 2.2 -- can't I change the snooze time -- when it pops up if I click snooze -it pops up a short time later
I would like it to snooze foe about an hour
thank you for a wonderful program
