
Customizable event categories

Posted by Spankey - 2006/11/04 18:53

Just an idea for an next version:

Customizable event categories: some (option)menu function, which allows you to create you're own categories for events (perhaps even delete or edit standard ones) and determine the appearance of this categorie (colour of the numbers, if, and which symbol will be used, and if the text will be in colour and / or bold).

I'm trying to accomplish this by editing the skin files, but I'm not very successful so far (see the support section) and this will make it a lot easier I suppose... B)

Rainy is aware of the wish for a GUI skin editor, but is working hard on the application itself. If I new more about GUI programming, editing XML files with a program, and maybe editing files in a zip; I would attempt to write a 3rd party app that would do just what you suggested, and then see if it could be a plugin to R2.
