
Rainlendar 2.0 build 26

Posted by Rainy - 2006/11/05 09:33

Build 26 can be downloaded from here:

Windows: Rainlendar-2.0.b26.zip

Linux: Rainlendar-2.0.b26.tar.bz2

This is beta version! It hasn't been tested.

There are some changes to the DST and incorrect time display issues. I'm not sure if I made things better or worse so if there still are events that display incorrect start or end time please answer to these questions and attach the event.

- What is your timezone?
- Are you using daylight saving time?
- What is the time Rainlendar shows?
- What is the time Rainlendar should show?
- If you set Options->AdjustDaylightSavingTime to false, does that make any difference?

The list of changes:

- 05 Nov 2006
 - o Fixed the Brazilian skin in the Shadow4 skin addon.
 - o Due date in the todo list uses the user defined format now.
 - o '%' -char got sometimes replaced with 37 in TimeFormat or DateFormat. Fixed.
 - o Fixed a crash when sorting the columns in manager.
 - o Fixed a crash when tray icon was removed from the skin.
 - o Start and end times were sometimes automatically changed when editing the event. Fixed.
 - o The ics-files can be now stored to a folder with non-ascii characters.
 - o Cancelling the import doesn't show error anymore.
 - o Legacy skins with foreign characters in the ini-file are not ignored anymore.
 - o Improved legacy skin support.
 - o Fixed few DST issues.
 - o Manager now displays the dates in the user defined format.
 - o DefaultAlarmFile is defined now with a relative path.
 - o Todo item priorities were shown incorrectly. Fixed.
 - o Rainlendar_ShowWindow() doesn't show the window if it's smartly hidden.
 - o Fixed a crash bug when dialogs were opened from a hotkey.
 - o Alarm set to 0 minutes will stay so also when the event/todo is edited.
 - o The languages should now work in Linux version too.
 - o The end date in managed was one day too far. Fixed.
 - o Some fixes to the window positioning in multimonitor environment with On Desktop setting.

Re:Rainlendar 2.0 build 26

Posted by Methos - 2006/11/05 21:51

When I start RL I get this error. I did not get this error prior to uploading b26. I was running b25 before.

Edit: Image was too big. The error stated:

The application failed to start because libcurl.dll was not found. Re-installing the application may fix this problem.

The interesting thing is, RL still starts up.

I seem to have forgotten to include the dlls to the archive (I was wondering why it was smaller than the installer). Anyway, you can either delete the NetworkPlugin.dll from the plugins folder or install the Pro version and get the dlls from there.

Re:Rainlendar 2.0 build 26

Posted by Methos - 2006/11/06 07:29

That worked, though it now takes a while before ever showing up on the desktop. BTW, I'm not criticizing, just trying to help in the testing in any form I know how.

Could you check from the Rainlendar's log why it takes so long to appear. Start it from the command line and give --debug as argument so you'll get the full log. The log has timestamps which should show where the time is spent.

Well, that's odd. Everything appears to be working fine now. I'm curious if it was due to restarting the computer. I tried exiting out of RL and restarting it and that only sped it up. Here's the code from the restart.

```
10:34:14: Error: can't open file 'G:\Program Files\Rainlendar2\license.r2lic' (error 2: the system cannot find the file specified.)
10:34:14: Reading skin G:\Program Files\Rainlendar2\skins\Shadow4.r2skin
10:34:14: Reading file xml/languages.xml
10:34:14: Reading file xml/elements.xml
10:34:14: Reading file xml/calendar.xml
10:34:14: Reading file xml/eventlist.xml
10:34:14: Reading file xml/todolist.xml
10:34:14: Reading file xml/tooltip.xml
10:34:14: Reading file xml/sidebar.xml
10:34:14: Reading file xml/alarm.xml
10:34:14: Reading file xml/long calendar.xml
10:34:14: Reading file xml/dual calendar.xml
10:34:14: Reading file xml/year calendar.xml
10:34:14: Reading file xml/digiclock.xml
10:34:15: Error: can't open file 'G:\Program Files\Rainlendar2\license.r2lic' (error 2: the system cannot find the file specified.)

Re:Rainlendar 2.0 build 26

Posted by joe771 - 2006/11/06 13:19

Seems to be working ok mostly. Some of my recurring events aren't working right it seems.

Timezone: GMT

Are you using daylight saving time: Yes

What is the time Rainlendar shows: Start 1.00pm, End 3.00pm

What is the time Rainlendar should say: Start 12.00pm, End 2.00pm

If you set Options->AdjustDaylightSavingTime to false, does that make any difference?

Yes, all events show correctly as far as I can tell.

I've attached a copy of the event.

Hope it helps. http://www.rainlendar.net/cms/components/com_joomlaboard/uploaded/files/Export.ics

Re:Rainlendar 2.0 build 26

Posted by Jackal - 2006/11/11 10:51

I thought I can type in the start time and end time for events in b25, but it seems that whenever I type in a time and click ok in b26, it just set it back to 12:00am (H 12:00 in zh-tw).

It happens even if I type in those which is already on the list.

Re:Rainlendar 2.0 build 26

Posted by Rainy - 2006/11/11 15:10

The time parser is not able to parse all the different time formats. You should be able to enter the time at least in HH:MM format (e.g. 19:30).

Re:Rainlendar 2.0 build 26

Posted by Jackal - 2006/11/11 18:33

Thanks!

I thought I could just choose the nearest time and change the minute part (eg. choose 10:30 and change the minute to 45 for 10:45), but if rainlendar cannot parse different time formats, maybe it is better to just list out the time in HH:MM format?

Re:Rainlendar 2.0 build 26

Posted by Rainy - 2006/11/12 04:39

For me it would be much better alternative but then people start to ask why they cannot have the time in their localized format. So, this is the best compromise for now. I can try to improve the parser in the future versions.

Only a minor bug with DST but i'll mention it anyway:

Timezone: GMT

Are you using daylight saving time: Yes

What is the time Rainlendar shows: 12.00am

What is the time Rainlendar should say: 2.00am

If you set Options->AdjustDaylightSavingTime to false, does that make any difference?

No

This occurs only on the day when British Summer time starts (March 26th 2006, March 25th 2007 etc.). It doesn't seem to happen at the end of British Summer time.

The event (for the 2007 date) is attached.

Re:Rainlendar 2.0 build 26

Posted by Rainy - 2006/11/18 08:55

The DST was adjusted two times on that date which caused the problem. It should work correctly in the next build.
