
birthday

Posted by StudioNeuneu - 2007/07/30 07:09

Hello.

I put my rainlendar (2.2) in french. I made some change in the skin (Shadow4), I made some new calendars. Today I saw there is no number anymore after the birthday. I think it is because I made a new calendat for the birthday. I don't know where to look now to solve this problem. Someone can help me???

The number after the birthdays does not depend on the calendar or the skin. As long as the event has "birthday" as category and it repeats every year the count will be added to the subject. Note though it's not added to the first occurence and you naturally have to have the "Add years to birthdays and anniversaries" setting enabled.

Thank you for the info.
I turned back the french name by birthday and now it work :cheer:
Thank you!!!

It would be useful to add feature counting years as configurable item for another events than birthday and anniversary. Or add another events to next version that count years.

I have event for deceased relatives and it would be helpful to know years from their death.

(sorry for my bad english)
