## ToDo list suggestion

Posted by alexdt27 - 2006/11/06 00:28

---

I propose adding a function that allows multiple ToDo list windows, instead of only one. same thing with events too. I believe it can help lay out tasks in a more organizing way, like a tab for family, one for business. Also adding more icons/selections for tasks (School, family, love ones?) or (as stated before) customize font for individual tasks to better visually prioritize them(size, bold, color, etc.)

Memo/sticker function can be helpful to put down thoughts or quick note to myself like a post-it but on the monitor.

When organize the ToDo list by due dates, it sure did put them into groups by dates, but within each day, the tasks are alphabetically ordered, is it possible to make them ordered by due time instead? so i know the order these tasks are due.

Rainlendar is already my favorite tool after using it for 2 days. keep up the good work guys, appreciated!!!

Adding of category colors/images is done through skinning, you can read about how to do it at Skinning R2.

When scripting becomes more powerful/api is released I might try to create a memo sheet as a plugin.

Thanks for creating a cool Rainlendar.

I wonder if we can make all the categories in Events and To do lists have distinguished icons (business, exam,birthday has it, but a few doesn't). For the sake of alignment and beauty, this will serve the purpose. Also, what if we add new categories like "study" "research" and want that they have their own symbols/icons? Or at least some generic icon (flower maybe) for any added new categories so they all will be lined up.

Thanks you all, and for all.

You can you just have to edit xml files. See my previous post for a link on a basic how to.
