## Lost the menu?

Posted by kwoo - 2006/11/06 04:17

---

I clicked the option to not have a systray icon like I used to in Rainlendar 0.22. However, then the menu does not work on the calendar. I can't get any menu to appear or even to change the months on the calendar. The program just sits on my desktop. I've tried to restart to no avail. Is there anything I can do so that I can edit things on the calendar again? Mouse-overs still work, sort of. They take a long time to appear and disappear quickly. Thanks!

I couldn't find where the setting is, but if you go to c:/Documents and Settings/"user"/.rainlendar then there should be an rainlendar2.ini file. Deleting it will remove you configurations. To help keep some setting you can probably edit it and save everything after into a new file. Delete it and run rainlendar again. quite and replace the section again. Can't promise anything but the worst it will do is make it so you have to configure everything again. (calendars will not be lost)
