
Time triggered script

Posted by phcalle - 2007/09/07 18:44

I'd like to write a script triggered every hour to change a image for example. (I found no other way to display 12 or 24 different images) Is there a possibility to start this script from Rainlendar automatically ?
Thanks..
Philippe, France.

The scripting interface is not finished yet so these kind of things are not possible yet.

I may be asking a similar question...I was wondering if there was a way I could create a list once and then trigger it through Rainlendar.

The idea is that, for all the time I spend on the computer, it would be good to have an alert that says "20 pushups", "30 situps", etc. I know I could individually add each event, but this would be more convenient as my work schedule is always different, and I don't want to spend as much time adding events as doing the exercises.

I don't know anything about programming Lua, or I see people do stuf via RSS. I'm sure I could figure it out, but any hints as how to start are appreciated.
Matt

I'm not really sure what you are requesting. Couldn't you just create a recurring event or task?
