## Shadow color

Posted by nick2588 - 2007/09/11 01:43

---

Why is the shadow always black? The purpose of the shadow effect is to increase readability of the text, but black text with a black shadow does no good whatsoever... :huh:

I have two suggestions. Please do one or both:

- 1) The shadow color should automatically be white if the text is dark and automatically black if the text is light.
- 2) There should be a tag like `effectcolor="255,255,255,0"` to set the color of the shadow (and other effects).
