## countdown xxx min -> alarm

Posted by Kosch - 2006/11/06 17:01

---

hy there,

i have a wish for a future version.

A Countdown for xxx min - and a alarm with any wav or mp3 file.

hope you can make it real.

Please alaborate; what would this be good for?

I have to confess I don't really get what you're driving at with this...

So basically what you want an egg timer!?

I don't think this kinda stuff would work well within the Rainlendar framework (concept-wise, mostly).

Just googled >> freeware and "egg timer" <<: The first result looks like a promising selection of such tools.

programms i can install more i want - but i want not a new program i want the feature that's all.

if you don't want it, it's ok.

Sorry, I never meant to offend you...

I just can't really imagine this kinda thing to work nicely in RL - but my imagination might simply be too limited here. ;)

no problem, i mean only a reminder for any things we have alle features for that (timer for dates and times) and a windows player for wav playing.  
much things i forget to do if i sitting on pc.  
i read news but i forget my washing machine in the cellar.  
i write mails but i forget the tea for my son (only 7 min not 50 ;) ).  
this is for what i want the timer, reminder, whatever.
