
Rainlendar 2.2 build 47

Posted by Rainy - 2007/09/29 08:03

Build 47 can be downloaded from here:

Windows: Rainlendar-2.2.b47.zip

Linux: Rainlendar-2.2.b47.tar.bz2

This is beta version! It has not been tested.

- o Some adjustments to the event list headers when items are more than week away from today.
- o The event list is shown in correct order again.
- o Overwriting a template didn't give a warning. Fixed.
- o Information about the deleted calendars is removed from the settings file now too.
- o Traytip can be closed again by clicking it.
- o Added support for strikethrough text.
- o Added "effectcolor" attribute to xml skins which can be used to define the shadow/border effect color.
- o Moved variables to a separate list in the skin settings dialog.
- o Variables can be defined as a list of strings now too.
- o Fixed line endings in the ics files written by Rainlendar.
- o Added "hue" to the image elements to change the color.
- o Group separators were missing from the todo list. Fixed.
- o Some adjustments to the timezone calculations for weekly recurring Outlook events.
- o Fixed traytip position if there are multiple rows of icons.
