
Rainlendar 2.2 build 48

Posted by Rainy - 2007/10/07 13:32

Build 48 can be downloaded from here:

Windows: Rainlendar-2.2.b48.zip

Linux: Rainlendar-2.2.b48.tar.bz2

This is beta version! It has not been tested.

- o Added support for exception days in Google calendar.
 - o Updated wxWidgets library.
 - o New skin: Chromophore
 - o Manager dialog crashed on Linux if there were no items. Fixed.
 - o Some more adjustments to the timezone calculations for weekly recurring Outlook events.
-

This release fixed my freeze-upon-task/todo from

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=36&func=view&id=4381&catid=3#4381

Great!!

Old problem - NOD32 antivirus (version of signatures: 2576 2007-10-07) warns about "Treat detected: Probably unknown NewHeur_PE virus".

Re:Rainlendar 2.2 build 48

Posted by sholmes1 - 2007/10/07 18:27

When using the New skin: Chromophore, it shows the date for each event. Example, for an event tomorrow it shows: Tomorrow 8.10. Is there any way to change that to: Tomorrow 10/8? I would prefer the Month listed first. I looked all over the options. I can add 10/8 to the event title, but I am not sure how to get rid of 8.10. I am sure I am missing it.

Is this possible?

Thanks...

Thanks very much for the implementation of Google Calendar exceptions! It's much appreciated, and works perfectly :)

Re:Rainlendar 2.2 build 48

I ran the main exe through Jotti's malware scan and NOD32 was the only one which heuristic scan thinks it found

something. Since this wasn't the first time NOD32 reports a false positive it looks like it has some problems with applications packed with UPX.

File: Rainlendar2.exe

Status:

POSSIBLY INFECTED/MALWARE (Note: this file was only flagged as malware by heuristic detection(s). This might be a false positive. Therefore, results of this scan will not be stored in the database)

MD5: 2065dd5bfdad47f55826cfde4659d290

Packers detected:

UPX

Bit9 reports: File not found

Scanner results

Scan taken on 09 Oct 2007 17:05:06 (GMT)

A-Squared Found nothing

AntiVir Found nothing

ArcaVir Found nothing

Avast Found nothing

AVG Antivirus Found nothing

BitDefender Found nothing

ClamAV Found nothing

CPsecure Found nothing

Dr.Web Found nothing

F-Prot Antivirus Found nothing

F-Secure Anti-Virus Found nothing

Fortinet Found nothing

Kaspersky Anti-Virus Found nothing

NOD32 Found probably unknown NewHeur_PE (probable variant)

Norman Virus Control Found nothing

Panda Antivirus Found nothing

Rising Antivirus Found nothing

Sophos Antivirus Found nothing

VirusBuster Found nothing

VBA32 Found nothing

sholmes1, I'll make the date configurable in the next build so it can be changed or removed completely.

Re:Rainlendar 2.2 build 48

2Rainy

Thank you for confirmation of wrong warning.

Re:Rainlendar 2.2 build 48

Posted by sholmes1 - 2007/10/09 23:03

I like being able to have the date there. It would be nice to edit it. Thanks for making the change.

Re:Rainlendar 2.2 build 48

Can you post a screenshot?

=====

Re:Rainlendar 2.2 build 48

Posted by timonator - 2007/10/14 17:23

there you go...

http://www.rainlendar.net/cms/images/fbfiles/images/rainlendar_bug.png

the thingies that are all over the screen are not caused by rainlendar, but by ksnapshot.

Does it help if you increase the "Copy transparency sleep time" in advanced settings?

=====

Re:Rainlendar 2.2 build 48

Posted by lukelukelukeluke - 2007/10/18 15:48

I also had this problem and my "Copy transparency sleep time" value was 0. Putting it at 75 seem to fix the problem so far.

Hello Rainy!

I wrote this to you for the beta version 43 and it is still happend, but no answer form you. So I quote it here with the hope you have a look for my problem.

Rorohiko wrote:

Hello Rainy!

1 I tried to connect Rainlendar2 with more then 5 calendars, but it always went back to the 5 calendars. It was also not possible the calendar: 'Default' to kill, so that I could install my fivth one.

I haven'd found any possiblity to change that, so I edited the ini-file and changed:

Count=6

That helped - but is that the right way?:woohoo:

2 When I imported more than 3 Calendars, Rainlendar2 can't show any calendar items anymore. So I have to close Rainlendar2 and to start again - which is pretty :silly: .

3 When ever I change anything in Rainleandar, it looks like it would start again and the screen is flickering. Is that normal?:evil:

Anyway, thanks for a good program!

RorohikoPost edited by: Rorohiko, at: 2007/08/03 16:29

What has changed is, that I can edit the ini-file and change the count to 6, but it still shows only 5 Calendars

Thank you for your work!:)
Rorohiko

Re:Rainlendar 2.2 build 48

There is no limit how many calendars you can have (my test config has 13 at the moment). I have no idea why you cannot add more that 5 of them. Can you send me (rainy@iki.fi) the Rainlendar's debug log when you try to add a new calendar?

Re:Rainlendar 2.2 build 48

Have a weird issue with the latest build (48), I can add an event via Rainlendar into my google hosted domain calendar, and it shows up fine. However I cannot see the event in Rainlendar

Re:Rainlendar 2.2 build 48

So NOD32 is determined to inform me that Rainlendar is a virus...And it's getting really annoying.

I've added the Rainlendar directory to NOD32's exclude list, however now it's informing me that Rainlendar - which is a virus - is starting up with my computer.

How can I made NOD32 stop?! :S

Re:Rainlendar 2.2 build 48

Posted by Rainy - 2007/11/04 12:26

ozgreg, can you see any Google events in Rainlendar or does the problem apply only to the new events? Is the event missing from all windows and even from the Manager? Are there any errors in the log file?

Re:Rainlendar 2.2 build 48-Date format fix in 2.3?

I was wondering if this was added in the latest version 2.3? If yes, how is this done?

Thanks...

Re:Rainlendar 2.2 build 48-Date format fix in 2.3?

Posted by Rainy - 2008/01/04 13:54

Go to Options->Skins, click Advanced, double click on the event list to get the settings for it. The date can be configured with the "Date format" variable.

Re:Rainlendar 2.2 build 48-Date format fix in 2.3?

Posted by sholmes1 - 2008/01/04 18:28

I changed it to %#m/%#d and now it shows today as 1/4 instead of 4.1.

Thanks a lot!
