
Removing the \"tooltip\" from the skin

Posted by noxxx - 2006/11/07 13:24

If I remove the tooltip in the skins menu and pass over the task symbol of rainlendar with the mouse, rainlendar crashes down, if i reactivate the tooltip the problem disappear.

I can remove the tooltip by disabeling all options in the advance menu, but it would be "nicer" by just removing it in the skin or disallow that option (so Rainlendar can not anymore crash).

Maybe you find the bug,

thanks for the program,

cheers noxxx

I'll fix that.
