## Dismiss for recurring event deletes all of them

Posted by mad - 2006/11/08 04:25

---

Probably this is my error, but for some reason a weekly event gets deleted (all future occurrences) completely when I press dismiss. I would assume, that dismiss will dismiss the event for 'that' day/particular occurrence of the event. Shall I get a newer release or can someone explain what I am doing wrong?

I have the same problem - all of events dismiss after starting PC or refreshing. What to do?  
Thanks R.

Yes, it seems to hide also the next event from the event list. You can set Options->Advanced->EventListHideDismissed to false until the problem gets fixed.
