Limit # of Displayed Coming Events

Posted by Jackal - 2006/11/08 09:53

_____

I have currently arranged my rainlendar having a year calendar on the upper part and the Event & Todo list at the bottom.
I have set the EventListShowComingEvents to 3 weeks (21), but sometimes when I have many events, the event list extend out of the screen.
Is it possible to add another parameter to limit the number of events to be listed (besides EventListShowComingEvents)?

_____

you should be able to specify the max height of the event list, which would then give you a scroll bar when you have too many events.
