
New User: Colours

Posted by chrisrobbo - 2006/11/08 10:10

Hi all.

I've just started using Rainlendar, and find it exactly what I wanted. I know it has a lot more capabilities than I am presently using.

What I am struggling to do is to have different colour icons for each category in my calendar. For example I would like a blue icon for an event in the Holiday category etc.

I'm pretty sure it's possible cos some of the screenshots i've seen have all different colour icons and also picture icons which indicate the category.

I just can't get mine to do the same. Am I missing something simple.

Cheers.
Chris.

Hi,

I don't know if this is what You need but changing colours, at least in default Shadow4 skin, can be done in two ways. Both of which require You to unzip the skin file (.r2skin) first.

Now You can start

1. Editing image files to change their colour - which is kinda 'brute force' solution so why not try:
 - 2a. Saving changed images as new and then
 - 2b. Editing xml files to define new elements and use them as needed

In elements.xml You'll find definitions for different elements (numbers, icons, fonts). You can edit existing ones or add new based on what is there. Then just add them to the specific window (calendar, todo list or whatever).

Also look here:

http://www.rainlendar.net/cms/index.php?option=com_joomlaboard&Itemid=27&func=view&id=300&catid=3

As Eli said, you will need to edit the skin to have customized event colorings.

However if you are just wanted those that appear in the screenshot on the main page, you will just need to select the correct category for it to use it.
