
support for old rainlendar server in Rainlendar2 ?

Posted by yknott - 2006/11/08 11:48

Hello there,

I've used the Rainlendar server to store my events and sync them with my various pcs. Now I've upgraded to version 2.0 and tried the PRO version but I don't know how to setup the new Rainy to interact with the server. Any suggestions?

Server support is now done through webDav. I don't think Rainy is planning on supporting the old Rainlendar server.
