
Rainlendar2-Unable to Locate Component...

Posted by mommaslam - 2006/11/08 14:24

I downloaded Rainlendar 2 and it worked at 1st, but when I restarted it I got the following message...

Rainlendar 2-Unable to Locate Component

This application has failed to start because MSVCR71.dll was not found. Re-installing the application may fix this problem.

Which I did, but that didn't work.

So, when trying to un-install, I get this message...

Rainlendar 2.0 Uninstall

Note: C:\Program files\Rainlendar2 could not be removed

After clicking the message off I see...

Un-installation Complete

Un-install was completely successful

How can I fix this? I would really like to use it. Thanks for reading and in advance for any help!
