
Online Calendar

Posted by webmaster333 - 2006/10/28 16:20

Hi,

what's the thing about the support of online calendars? Can I use my Google calendar with your software? It sounds too good to be true, but Rainlendar is still a great program without that feature.

I've been using version 1 for a long time now and just found out that there is this new version with all its cool features.

Reading events from Google calendar is supported but you cannot write to it (yet).
