## color by priority

---

Is there any way to apply a specific color to priority? For example: I wish to high priority events on To Do List were always be displayed in red, despite of displaying type (ie. by date/category/priority). Is that posible?

I am pretty sure it is not possible, I will look more into it later. But you can add another category "important" to them, to have them turn red. If you display by category then it will have an important section and it also in the other associated section.

Hello,

I am creating a system to display the priority of a task in the todolist, using images for normal, completed, cancelled, overdue, high, medium, low priorities.

It work, I can show my graphics and they change when they need, but the issue is the list buttons (the dots, to collapse or expand), they disappear!

I need to find a way to show my images that change color by priority and status, and te list dots - \_-" But I start to be pissed of this thing and I go make a pause xD

In fact I wanted to set the Tags like in the tags of entries but not working, wanted to do it in the contrary... and no luck it didn't work...

I add a screenshot when I finish my pause : )
