## Vitrum-N change font colour

Posted by Horst - 2007/11/19 20:31

---

Hi there,

I am using the Vitrum-N Skin and it is great.

However, is there any way to change the font colour to black?

I tried to use different categories, but I could not find any category which uses black fonts.

Make copy of Vitrum-N.r2skin and rename it to Vitrum-N1.zip.

Unzip file in same directory to folder Vitrum-N1 and delete zip folder.

Open folder and find file of your favorite window, for example sidebar.x m l.

Open it by Notepad and find `d e s c r i p t i o n` of element which color you want to change.

For example, if you want to change color of ToDo item, under line `"todolist id=..."` find `"item"` `"appearance`

`padding="28,0,16,2" element="font.normal" color="255, 255, 255, 185"...`

Change color code to black - `...color="0, 0, 0, 255"`, save changes, refresh Rainlendar, load new skin Vitrum-N1 and enjoy. :)
