
Problem running linux version

Posted by blip - 2006/11/09 17:28

Hi, I tried running both lite and pro linux versions after tar with xjvf flags.

Here's what happens...

```
-----  
#./rainlendar2  
./rainlendar2: error while loading shared libraries: libexpat.so.1: cannot open shared object file: No such file or directory  
-----
```

Using PCLINUXOS distribution and synaptic shows i have correct dependencies. I'm new to linux so not sure about this...

Any ideas ?

Thanks

It is likely that you have a newer version of expat.so I think with SUSE linux I ended up symlinking to the libexpat.so file.
ie(#ln -s /usr/lib/libexpat.so /usr/lib/libexpat.so.1)
