## Bimon question

Posted by zarz - 2007/12/16 15:53

---

Hi,  
I've just started using Rainlendar and so far I absolutely love it! Syncing with the cell phone through My phone explorer works like a charm. Big up to the creators of both programs!

My question is, I started using Bimon since I wanted a clean non-transparent skin. Is it possible to

- A) Show week number like in the original skin?
- B) Show icons like in the original skin?

Thanks

=====

All of your questions have answer "yes", but you should modify skin (make background wider, add small bitmap figures - weeknumbers, add icons and so on). This task is possible, but quite laborious. Rainlendar Help is very useful for this work.

Then I have to ask, is there any skin which looks like the original one but without the transparency?

If you say about very sharp font on TFT display, there are no other skins without transparency. Next version of Vitrum (v2.0 for Rainlendar 2.3) is not transparent. But it not have weeknumbers and icons.
