
Outlook 2000

Posted by rainfall - 2006/11/09 19:56

Hello,

Rainlendar is a very great tool - keep on developpig.

I formerly used version 0.22 with Outlook and it worked fine. Now I installed version 2 b25 and I didn't get any event of outlook on the desktop, even I created a new calendar with outlook settings. In the log file following is written:

```
00:52:42: Microsoft Outlook: Read 0 appointments and 0 tasks
```

```
00:52:42: CItemImage::Draw(): Unable to find the element ""
```

```
00:52:42: CItemImage::Draw(): Unable to find the element ""
```

What might be wrong ?

Thanks

Rainfall

Run the Rainlendar2.exe with --debug argument so that it will create the full debug log and see if there are any errors in it (or attach the log here and I'll take a look at it).

Thanx for the hint. There was an error with the license file and I corrected it. Now he find's the license but there are no events of outlook shown. If I start the old version the correct events are shown.

Therefore I attached the log-file. Please take a look at it.

That's probably a unicode issue. Try with build 28 (once it is released). I did some changes to the Outlook plugin which might help.

Hi,

sorry that it took such a long time but before christmas time is too short.

Now I testet it with 2.02 b32 and it got better. The time of the event is shown but not the text. Even the ToDo list is empty. I attached rainlendar2.log again.

Good time and keep on going. http://www.rainlendar.net/cms/components/com_joomlaboard/uploaded/files/rainlendar2-674b120df5ef19fea7ccb532e0239966.log

There seems to be still some Unicode problems with Outlook 2000. I'll try to fix that.
