
Skin size

Posted by Götz - 2007/12/23 22:28

Hi, I will make the original skin from the b53 bigger.
I have tried changeing the scale parameter value to 150, but the calendar becomes to slow when I change the month for example (is this maybe a bug?).

So I decided to change the skin manually.
I have edited some files (calendar.xml, calendar-bg.png, etc). Now the background is ok, but the calendar itself is in the original size, how can I change this?

I have attached an image to show how it looks right now.

You should change also calendar width, height and date font size.

Thank you! The are many configuration options :lol:
Now the calendar is bigger and I don't have to go near to the monitor! :laugh:

But I have now another question, how can I move that white square that is on the current day? Its is not aligned, like the in the original skin. http://www.rainlendar.net/cms/images/fbfiles/images/Rainlendar2_big.png

It's alignment problem. Try to change
element="bitmap.today" align="BOTTOM-LEFT"
to
element="bitmap.today" align="CENTER-LEFT"
or TOP-LEFT.

Hi, with

element="bitmap.today" align="CENTER-LEFT"

worked better, but with

element="bitmap.today" align="TOP-LEFT"

Now it works great!

Thank you very much!
