
How to widen ToDo & Events boxes?

Posted by scott - 2006/11/09 20:37

What settings can I change to make the ToDo & Events boxes wider?

In Options / Skins / Details I see mention of the commands Todolist width & Eventlist width, but I don't find where to set these values in Rainlendar2.

(Rainlendar2 on Windows XP SP2)

Thank you for Rainlendar!

In the advanced skin options select the event list window from the tree and click Settings.

Rainy,

Thank you.

That was exactly what I wanted. I've now increased widths to 250.

And again, THANK YOU for Rainlendar!

Where do you see it? I looked on advanced and see nothing of what you talk about.
