
Missing strings in Pot-file

Posted by Arne Anka - 2008/01/05 17:18

I get 2 dialogs in english when re-installing a skin:

The skin "xyz" already exists. Do you want to replace it?

and

The skin was installed successfully! Please refresh (or restart) Rainlendar to see the changes.

I also got an error dialog that starts in english, saying "Startup Error" and the message is in danish.

Found and fixed the "Startup Error" text. The English texts that are shown in installation happen because sometimes Rainlendar has to spawn a new process to handle the installation and that doesn't load the language files so you'll get all errors and other information always in English. I'll check if this could be fixed.
