## icon problems in eddited elements.xml

Posted by Spankey - 2008/01/12 14:36

---

Hi Huys,

I've managed to display my Outlook calendar into Rainlendar. That was pretty easy en works great! (my compliments ;) ) I've even been successful to add into the elements.xml file (attached)the same events as I use in outlook. The most work very well, but some icons aren't shown... Did I make a mistake in the script? All I did was copy existing events and edit them...

Can someone take a look and given me some advice? The events I've added are beneath "work" (start from "Actief") and some examples from which icons aren't displayed are "Familie" and "Kika".

Thnx alot!! <http://www.rainlendar.net/cms/images/fbfiles/files/elements.txt>

The missing icons are not defined in the elements section (see the top part of the file). You need to add the icon definitions to there before they can be used.
