## Correct weeknumber problem

Posted by Alexander - 2008/01/18 12:59

---

Sounds like very simple task.

I have a simplest skin with today data in window. Any month calendar shows correct weeknumber for January 1 - January 5 (week number 1). Current time format %W or %U gives first number of week 00. Is it possible to get week number 1 for January 1 of any year?

My simplest test skin enclosed (only 2 KB ). <http://www.rainlendar.net/cms/images/fbfiles/files/WeekNumberTest.r2skin>

I'm not sure why it works like that. The week number is calculated by the standard OS function so I would imagine that at least one of the format commands would return the ISO standardized week number.
