## about rainmeter..

Posted by bnsonear - 2008/02/01 00:08

---

I'm sorry for writing about rainmeter in this forum but I didn't find any other place. Thank you for reading.

Hi.

I'm a litestep user in Korea.

Recently I was modifying a LS theme.

At the first time, I included rainmeter-0.9 and the ini settings from other theme.

It was loaded well but due to some limitations I tried to update it to rainmeter-0.14.

After I updated rainmeter 0.9 to 0.14, I get an error messege like that

"The selected config

(Lmeter\C:\LiteStep\themes\COLOC+BAR\config\rainmeter\_skins\meter\meter.ini) cannot be found.)"

All the path is correct but "Lmeter\" in the first part is not normal. The changed line is only the following.

```
*NetLoadModule rainmeter-0.9 load rainmeter.dll
```

became

```
*NetLoadModule rainmeter-0.14-32bit load rainmeter.dll
```

When I restored rainmeter to 0.9 without touching any kind of config files, module was loaded well again.

I tested it for the other theme using rainmeter-0.9 and got the same symptom.

Rainmeter 0.9 - loaded well

Rainmeter 0.10 - Error Message #1

Rainmeter 0.11 - Error Message #2

Rainmeter 0.12 - Error Message #2

Rainmeter 0.14-32bit - Error Message #3

Error Message #1

"Error: Exception during module initialization"

Error Message #2

meter\....correct path for INI.....

Error Message #3

Lmeter\....correct path for INI.....

summary : updating rainmeter 0.9 with previous setting casue path problem. (Lmeter\ or meter\)

To fix this problem, what can I do?

I need your advice. I want to provide log file of LS but I couldn't find the way how to enable log in LS.

My OS is XP sp2 32bit.

It might be quite tricky to get the 0.14 to run as a LS plugin. Unfortunately I don't remember anymore what is needed (or if it's even possible) as it's been years since I tried Litestep the last time. I actually don't even run Windows anymore so I cannot even try it myself (not that I would have time for it). So, it's probably better to keep using the 0.9 if you want to run Rainmeter as part of LS and not as a separate application.
