## Rotation / changing sizes of skin \"Bimon\"

Posted by daniel337 - 2008/02/21 17:56

---

Hi altogether,

I just installed the skin "Bimon" for my Rainlendar, great optics!

But now I would like to change the adjustment (size) of this skin.

Actually I chose the double calendar style with two months one upon the other. Thereunder the items of date and tasks appear.

How to do to get this fields (calendar1, calendar2 etc.) fitted side by side (horizontally) instead of vertical? I guess I have to change some parameter in my rainlendar2.ini. But which and where exactly?

Would be glad to get some help from you. Thanks in advance.

Daniel

Change width and height of dual calendar.x m l window and change coordinates of all elements except first month calendar. See details in Rainlendar Help (User Guide).

Hi Alexander,

thank you for your answer.

But where can I find this file "dual calendar.xml"?

Daniel

Make a copy Bimon-copy.r2skin file. Change extention .r2skin to .zip. Unzip Bimon-copy.zip. Open Bimon-copy folder and inner x m l folder.

File dual calendar.x m l corresponds to dual calendar window. Open it with text editor and change coordinates.
