
Rainmeter question re mouse action

Posted by bodhicoyote - 2008/02/29 21:31

Hi Rainy,

I'm using Moshi's picture frame skin for Rainmeter, which is a slideshow, in random order, of a specified folder.

Is there a way to have a mouse action (RightMouseDownAction, etc.) to open the currently displayed image in its default application (XP picture viewer in my case)?

Thanks :)
