
Question about online Calendar

Posted by DaveG - 2006/11/11 04:55

Rainy,
I wanted to PM this to you, although I could not find a PM facility, so I'm having to post it.

I'm currently using Rainlendar 1, and downloading a .ics file from my online Calendar, which Rainlendar then displays on my desktop for me.

Would you please explain what I can do with the online calendar in Rainlendar 2, that I can't do with Rainlendar 1 and the little download program I use (wget).

The network calendar does basically the same what you can do with wget. The benefits that you get from the plugin is that it's automatic so you don't have to set up any scripts and the plugin is able to upload the changes to the web server too.
