
Rainlendar 2.3 build 56

Posted by Rainy - 2008/03/25 12:34

Build 56 can be downloaded from here:

Windows: Rainlendar-2.3.b56.zip

Linux TAR: Rainlendar-2.3.b56.tar.bz2

Linux DEB: rainlendar2-pro_2.3.b56-1_i386.deb

Mac OS X (Intel): Rainlendar-2.3.b56.dmg

This is beta version! It has not been tested.

- o Added option for xml skins to execute the given function on startup/refresh.
 - o Second parameter for a lua function wasn't parsed correctly. Fixed.
 - o Improvements in the scripting support: added possibility to download files and implemented attributes for all items.
 - o Images can have uniform scaling.
 - o Added possibility to hide canceled tasks from the todo list.
 - o Hiding completed/canceled tasks hides them in the calendar too.
 - o Keyboard navigation changed the months twice in Mac. Fixed.
 - o Added option to (not to) use window names in the calendar and other windows.
 - o Newlines in the text caused drawing problems if there was room only for a single line. Fixed.
 - o Help didn't work in the Mac version. Fixed.
 - o Changed the way dates are calculated in the calendar. This hopefully fixes the problem with duplicate dates.
 - o Moving all windows at once to the active skin didn't work in Mac. Fixed.
 - o Single instance check doesn't prevent the application from starting anymore.

There is also an addon package for the Shadow4 skin for those who are interested. You need this build (or never) to use it. It can be downloaded from here:

Re:Rainlendar 2.3 build 56 - can't dismiss alarms

Posted by Icarus3000 - 2008/03/26 07:54

When I upgraded to build 56 I am not able to dismiss daily alarm pop ups. This happens when I first load Rainlendar, and only stops if I refresh.

I downgraded to build 55 and behaviour went back to normal.

What about showing MS outlook tasks in calendar? Is there a chance to have it in next build?

Re:Rainlendar 2.3 build 56

Posted by Rainy - 2008/03/28 04:09

I noticed the problem with the alarms too. I'll fix that in the next version.

I'm doing some work in the Outlook plugin at the moment so if I have time I'll add the option to put the tasks to the calendar too.

I'd love to have iCal & Adressbook integration - that would be awesome!!! :)
And a option for stay on dektop -> available on all spaces and no dock icon. I hope this features will be in next versions.
But the beta works great so far, thanks for that! ;)

I'm a relatively new Mac user and am having trouble loading the Mac version of Rainlendar. I've downloaded the above file and used Stuffit to extract the .dmg file. However, when I click on the .dmg file, I get a message that there are no mountable files found. I'm running Leopard with all the latest updates.
What am I doing wrong??:S

download the file again, or use unrarX to extract ;)

Thanks. I'm up and running. Rainlendar was one of the few things I was missing after switching to Mac from PC. It's great to have it back.:)

I have just loaded Rainlendar on my new iMac and want to load all my events from my Linux machine into it. I have found the Default.ics file in Linux but can't find the equivalent file on the iMac. How do I import the data? Thanks - Richard

You can import the data in the Manager (Import->iCalendar format in the File menu).

Re:importing data from PC to Mac

Posted by amandajoy - 2008/09/08 13:46

I just got a mac. After using Rainlender on my PC for a while, i was really happy to see that it was now available for mac. the only thing that could make me even happier about this is if i could import the data from my mac. i have rainlender up and running well on the mac, and i have copied my data files from my PC to my mac. I can't figure out where i need to put them though or how to get the program to recognize them. I read the forum messages on the topic and saw a reference to an import function in the manager. is this only in the pro version? is it possible for me to move my data over?

and thanks so much for a great program.

If you exported the events as iCalendar format (*.ics) you can import it from the Rainlendar's Manager dialog.

Hi, I have a problem with sync Rainlender and iCal. When I use import function in iCal and choose Rainlender ics file, it shows me error "This calendar file is unreadable. No events have been added to your iCal calendar". How I can fix this problem please? :huh:

UPDATE: I have already solve the problem. I was trying to upload calender.ics at first. It works, if I export events from Rainlendar Manager to iCalendar format.
