## Rainlendar 2.3 build 57

Posted by Rainy - 2008/04/06 10:31

---

Build 57 can be downloaded from here:

Windows: Rainlendar-2.3.b57.zip

Linux TAR: Rainlendar-2.3.b57.tar.bz2

Linux DEB: rainlendar2-pro\_2.3.b57-1\_i386.deb

Mac OS X (Intel): Rainlendar-2.3.b57.dmg

Notes about the Outlook support:

- Before you start to edit your Outlook events with Rainlendar I suggest that you backup your data.
- Only current timezone is supported, don't edit items which are created on different timezone or Rainlendar might convert it to local time.
- If a recurring event has had modifications to single items it's not possible to edit it. Deleting single events is supported though.
- If the description of an event has any formatting, editing it with Rainlendar will remove everything else but the text.
- I have not yet tried this with an Exchange server so I have no idea how Rainlendar behaves with it.

This is beta version! It has not been tested.

- o Added write support for the Outlook plugin. It's now possible to edit Outlook appointments from Rainlendar.
  - o Fixed a problem with duplicate days on DST change in some timezones.
  - o Alarms couldn't be dismissed from the menu. Fixed.
  - o \r is not shown as a square anymore.
  - o Added an option to show all tasks also in the calendar. This overrides the per-task setting.
-

---

In Outlook 2007 if a single instance of a recurring appointment is moved, for example from Tuesday to Wednesday, Rainlendar shows the appointment on both days. The original appointment date is not deleted.

Can you attach the appointment (save it as Outlook Message Format (\*.msg))? I tried this with a weekly recurring appointment in Outlook 2000 but that at least was shown correctly.

---

Sent as an attachment to your support email address. Let me know if you need anything else.

- Only current timezone is supported, don't edit items which are created on different timezone or Rainlendar might convert it to local time.

---

I have some troubles with Outlook events time....I am in AEST (Sydney, Australia) timezone and I did not set any timezone for event. Calendar shows the right time, but in different day:-)

It looks like it recalculated time to GMT....?

---

---

And another thing....edit links for outlook events and task do not work...if i click on it, it shows this:

-----  
outlook:00000000be7d6b32ec64874b8a87d7ed00355cff24622e00  
-----

Windows cannot access the specified device, path, or file. You may not have the appropriate permissions to access the item.

-----  
OK  
-----

---

=====

The weekly recurring appointments didn't adjust the timezone properly which caused the problem. I'll fix that in the next build.

I wasn't able to reproduce the problem with the Outlook links. What Outlook version are you using?

---

=====

---

Outlook 2007 SP1  
But without SP1 it does not work as well.

---

o Added write support for the Outlook plugin. It's now possible to edit Outlook appointments from Rainlendar.

Only to edit appointments?

Or can I also create appointments in Rainlendar, that will be synced into Outlook's calendar?

---

## Re:Rainlendar 2.3 build 57

Posted by Rainy - 2008/04/16 10:38

---

Flyboys: Microsoft removed the support for the links from Outlook 2007 for some reason so they don't work in that version.

Chillz: Yes, you can create new Outlook appointments with Rainlendar too. And tasks.

---

---

So with Outlook 2007 I cannot open tasks from Rainlendar?

---

## Re:Rainlendar 2.3 build 57

---

Do I need to purchase a license to run Rainlendar on my Mac? I downloaded it from your link here, and the process seemed to work normally, but the application won't open. Maybe there is something I'm doing wrong. I don't know a whole lot about computers. I have a MacBook with OSX (10.4.11 - That's Tiger, I think).

---

## Re:Rainlendar 2.3 build 57

---

Flyboys: Not with Outlook's own editor, but in the latest build you can edit the Outlook's events directly in Rainlendar.

Pemberly: At the moment the Mac version requires Leopard.

---
