
Converting Old skins to Rainlendar2 format

Posted by sholmes1 - 2006/11/11 14:15

Someday, will there be a utility to convert old skins into the Rainlendar2 format?

If not, will a step by step procedure to do this be available at some point? I know you are busy...just wondering. I like some of the features of the Shadow4 skin that I can't use with the old skins.

Thanks....

There will be instructions how to create the new r2skins but it's unlikely that I have time to implement any conversion utilities.

Ok, thanks. If I know what to do, then I can do my best to convert it over to the new version.
