## Rainmeter question

Posted by crtcmp - 2008/06/16 07:36

---

I couldn't find a proper rainmeter forum, so I guessed that this would be the best place to ask.

<http://i299.photobucket.com/albums/mm316/critcomp/desktoprainmeterwinamp.png>

As you can see in the screenshot in the link I'm using LAvalon's Blackglass, which I have tweaked a bit and added a few new meters. The thing is that I use Foobar 2000, not WinAmp, and I simply can't get the meter to display Foobar 2000 instead of WinAmp when Foobar isn't playing. Does anyone have an idea of what line i need to edit in .ini? I think these are the related measures and meters, but I just can't figure out what to do:

```
Measure=Plugin
Plugin=Plugins\WindowMessagePlugin.dll
WindowClass=Winamp v1.x
Substitute="":", " - Winamp":", "":", "
UpdateDivider=10
```

```
Measure=Plugin
Plugin=Plugins\WindowMessagePlugin.dll
WindowClass=Winamp v1.x
Substitute="":", " - Winamp":", "":", ".":", "1":", "2":", "3":", "4":", "5":", "6":", "7":", "8":", "9":", "0":", "&":"%26", " ":", "+", "+-":", "&qtrack="
UpdateDivider=10
```

```
MeasureName=MeasureWinAMP
Meter=STRING
X=15
Y=25r
w=160
h=30
FontColor=255, 255, 255, 255
FontSize=9
FontFace=hooge 05_53
StringAlign=Left
AntiAlias=1
ClipString=1
```

Any help will be greatly appreciated

You need to install a foobar2000 component that emulates the WinAmp API. You can get that from [Here](#).
