
Rainlendar 2.3 build 60

Posted by Rainy - 2008/06/29 09:37

Build 60 can be downloaded from here:

Windows: Rainlendar-2.3.b60.zip

Linux TAR: Rainlendar-2.3.b60.tar.bz2

Linux DEB: rainlendar2-pro_2.3.b60-1_i386.deb

Mac OS X (Intel): Rainlendar-2.3.b60.dmg

This is beta version! It has not been tested.

o Changed the alarm to play the sound with Windows multimedia API so other formats (mp3, mwa, ...) than just wav is supported now too.

o Added header to the alarm element which contains the date of the event and the due time.

o Centered text wasn't drawn in the correct place. Fixed.

o Copying tasks is now possible only to calendars which support them.

o If a skin doesn't contain any default windows all of them are shown.

o Removed the Outlook edit link texts from the print output and from the menus.

o Skins with '#' and '%' in the name or path should work now.

o Added some more error handling to the scripts.

o Fixes to the alarm in weekly recurring tasks.

What about the "stay on desktop" function in mac osx? Without that, Rainlendar is useless for me... :/
Would love to see this in the next release ;)

Do you mean that the calendar should stay on the desktop when you press F11 (Show Desktop)? I'm not sure if that's even possible or at least I haven't seen any application which would work like that. If you just want the calendar to stay in all the virtual spaces you can change that from the System Preferences.

Re:Rainlendar 2.3 build 60

yeah. Rainlendar should stay on desktop when i hit F11. And it should not show up in the tab switcher (command + tab) and Exposé. It should behave like a standard desktop icon. There is a point in the rainlendar preferences-> Position: on desktop. But its outgrayed. On windows this works.

There is an app that can do this: Amnesty Widget Browser:
<http://www.amnestywidgets.com/WidgetBrowser.html>

With this app you can stick all your dashboard widgets to the desktop...
This is the way I actually setup my todos and events. Here is a screen of my desk...

Hope you get me ;)

Ok, I'll try to take a look at the application. It might take a while though to figure out how it does things since I have very little experience in Mac programming.

the header for the alarm event works.
i think due/overdue time should not be displayed on all day events.

btw: hue/saturation is not supported for bitmap fonts. it would be nice if this could be included.

True. I changed the alarm header so that for all day events it now shows only the days to the event. The HSV, contrast and brightness filters will be available for the bitmap fonts in the next build.
