Hello dear forum,

I am soooo confused.. Some of the skin that I downloaded and installed can work but others(that I really love) can not be uploaded on the software.

For example I ve put 5 skins under Rainlendar skins folder but only 2 of them are shown in the rainlendar after refreshing.

I ve tried to run different versions of Rainlendar but it just DIDNT work....

What shall I do!!! Please advise~~~

It would have helped if you had included a link to the non working skins. It might be that Rainlendar2 doesn't support them for some reason. Anyway, if the skin isn't working there should be an error in the Rainlendar's debug log.
