## Exception Date

Posted by fabio75 - 2006/11/13 15:32

---

I set a Event for Repeat every week. When i delete a recurrence, I reply "Yes" for delete only this instance but in the Events list, the Event isn't delete. When I delete the instance, in the "Exception Dates" in Recurrence tab, the first date of Events is added and not the correct date.

I try to add the correct date in the "Exception Dates" but the events is always displayed in the Events list.

Windows XP SP2  
Rainlendar 2.0 Pro

I tried this but wasn't able to reproduce the problem. Can you attach the event and tell what your timezone is?

The Event is "Rainy Test". My timezone is GMT +1 (Italy).

The events is set to start every week (First date is 13/11/2006). Now, 20/11/2006, I have deleted the current instance, but in the events list is visible.

I found out what's the problem. Deleting doesn't work from the event list but it works from the calendar. I'll fix that.
