
A lacking of Rainlendar2 skins (.r2skin)

Posted by slappy - 2008/07/22 16:40

I'm new to Rainlendar and am trying to adapt to it quickly but finding there are few options to finding the newer format (.r2skin) to skin the program. Also, there is little info on how To Create Rainlendar Skins. While I like most of the skins that are out there I would prefer to design my own. How does one manipulate the .r2skin file? Thanks for any info! Is anyone else experiencing slow load time on customize.org?

Rainlendar's help file contains a tutorial and skin reference which should be helpful.
