## Add Skins Ubuntu Help

Posted by sandman383 - 2008/07/27 18:20

Hello

I have:

Rainlendar2

Version 3.2 (b54)

Build Dec 2007

On Ubuntu 804

I'm new to Ubuntu and I would like to add some skins to Rainlendar.

If I take it correctly the .ZIP downloads are for Windows and the .R2SKI are Linux based systems?

By the way there doesn't seem to be that many .R2SKIN versions? Asuming that I have been searching correctly?

I take it I have to install them through the TERMINAL. Does any one have and steps on how to do this? The only SKIN folder that I have found was out at /usr/share/rainlendar2/skins

Any suggestions? :S

Thank you.

The skins are not platform dependent so both the zip and r2skin files should work in Linux too. You should check the ini-files though that they don't contain any absolute paths in them.

The /usr/share/rainlendar2/skins is the correct place to put the skins. The r2skins can be just copied to there and the contents of the zip files must be extracted into the folder.
